

# MEASURING FUNCTIONS – OVERVIEW

## Single measurements with positive polarity sign (+A)

Measuring external dimensions with use of a measuring stand, snap gauge etc.

## Single measurements with negative polarity sign (-A)

Inspecting sizes with change of the polarity sign. Display shows a low value for a small bore or a high value for a large diameter.

## Sum measurements with positive polarity signs (+A +B)

Measuring external dimensions regardless of form and position errors.

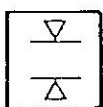

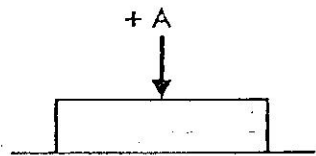

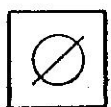

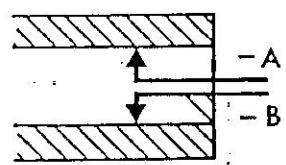

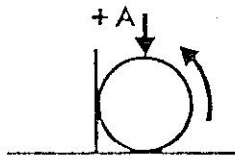

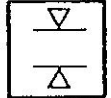

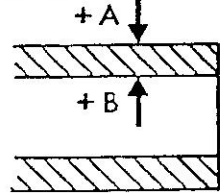

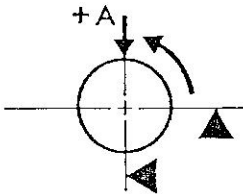

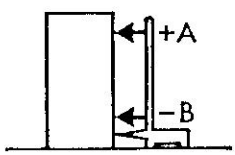

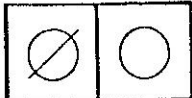

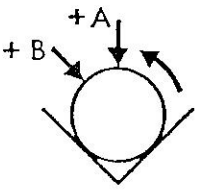

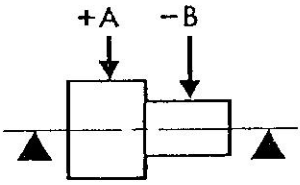

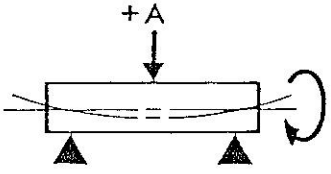

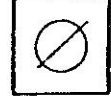

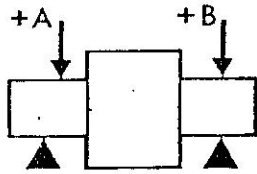

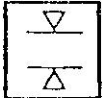

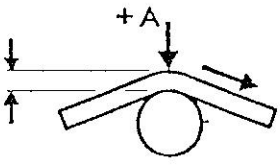

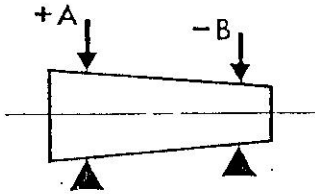

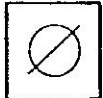

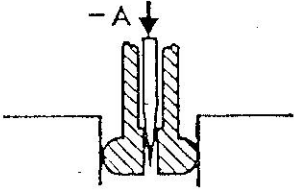

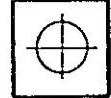

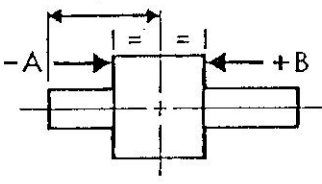

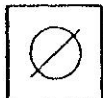

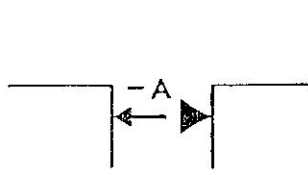

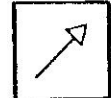

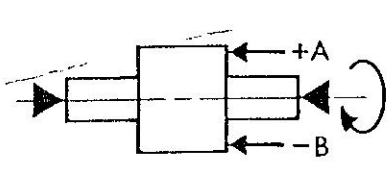

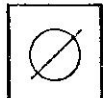

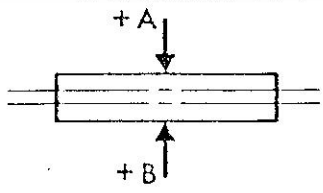

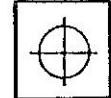

## Difference measurements with opposite polarity signs (+A -B)

Performing step, cone and inclination measurements.

Establishing form and position errors such as runout errors with use of the memory function «max.-min.» as shown in this example.
